CRAFTED
INSTRUMENTS

CRAFTED
INSTRUMENTS

CRAFTED "Surface"

The Standard Mirror

- Fine image without refractions under mid luminous conditions
- Ideal for standard treatment like diagnostics, scaling . . .

CRAFTED"Rhodium"

The Premium Mirror

- Outstanding image without any refractions, even under higher luminous conditions
- Excellently for surgery, treatment of deep cavities, endodontics, implantology etc.

Due to the lack of a standardized measuring force, clinical measurements obtained by various methods of probing are subject to contradictory interpretations. The only way to attain an objective assessment of periodontal conditions is by using force-sensitive periodontal probes. When evaluating periodontal diseases, probing measurements are affected by numerous subjective and instrument-related influences. In the process, the actual probing depths are frequently underestimated. If the probing force is too low, then the soft tissue morphology is more of the limiting factor for the probing measurement than is the share of coronal, supra-alveolar fiber structures. Using **DB764R** and **DB765R** probes, it is possible, thanks to the defined spring pressure of 0.2 N, to perform standardized probing measurements, especially where inflammatory changes in the gingiva in the context of long-term studies are concerned and in follow-up care in connection with periodontal disease.

Special combination of GRACEY-Figures

The combination of high rigidity and filigree-fine working ends means that stubborn plaque in particular can be removed thoroughly and efficiently with rigid curettes. It is no longer necessary to carry out time-consuming repeat scaling with flexible curettes. Flexible curettes should always be used to complete root planing.

The Gracey Figures 12/13 and 11/14 prove to be particularly time-saving, since using Figure 12/13 all mesio-distal surfaces in the side tooth area, e.g. in the first quadrant, can be completely treated in vestibular direction in one step without having to change the instrument. It is only with the change to palatinal direction that Figure 11/14 is used. The second quadrant begins of course with Figure 11/14 for mesio-distal in vestibular direction, etc.

- Very delicate working tips facilitate access to dental implant collar
- No risk of infection from curette abrasion
- Low implant damage risk
- Manually sharpenable

To ensure the long-term success of an implant, consistent aftercare is very important.
To eliminate plaque on the implant-abutment interface, titanium curettes can be preferable.

Micro Surgery

New micro instrument handles

As well as its optically appealing design, the new surface we have created for the handles of our successful micro instruments offers principally hygienic advantages. The substantially improved grip allows working with minor physical strain more fatigue-free working.

Scissors

Screw connection providing:

- smooth and reliable function
- longer life time by the possibility of regrinding

CRAFTED
INSTRUMENTS

Special hint

Since suture material is rather tough, the cutting capacity of scissors is quickly reduced which is noticeable as soon as tissues are cut afterwards.

Our solution

To cut sutures with special ligature scissors. The ligature scissors FD252R have additionally rounded edges to avoid sutures to get jammed.

www.craftedinstruments.com

FD251R

Micro scissors (spring type), curved, sharp/sharp

180 mm, 7"

FD252R

Micro ligature scissors, curved, sharp/sharp, one blade serrated, for suture material 6/0 – 8/0

180 mm, 7"

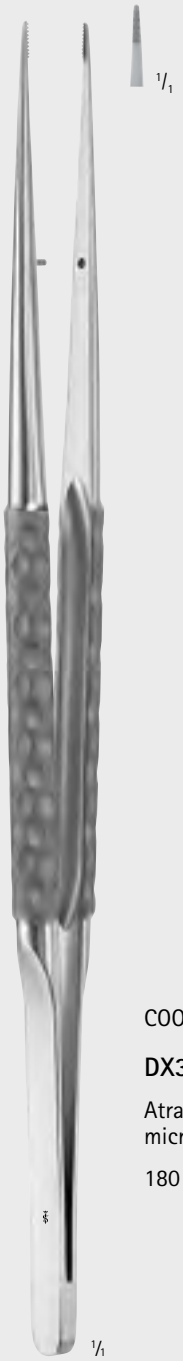

CRAFTED INSTRUMENTS

DIADUST™

FD258R – FD259R

Micro needle holder for
suture material 6/0 – 8/0
180 mm, 7"

CRAFTED INSTRUMENTS

www.craftedinstruments.com

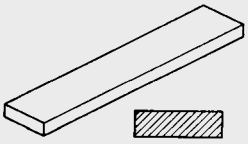

Rounded plate-shaped working tips allow more movement, and significantly increase the radius of mobilization in frontal and lateral sub-periostal preparation.

The sharpened edge of the instrument tips also allows sulcular as well as tunnel technique preparation (as with the envelope technique).

The design and angle of the working tips significantly facilitates preparation in convex areas.

CRAFTED INSTRUMENTS

DB095

Original Arkansas grinding stone, for grinding on tunnellin instruments

75 x 25 x 7 mm

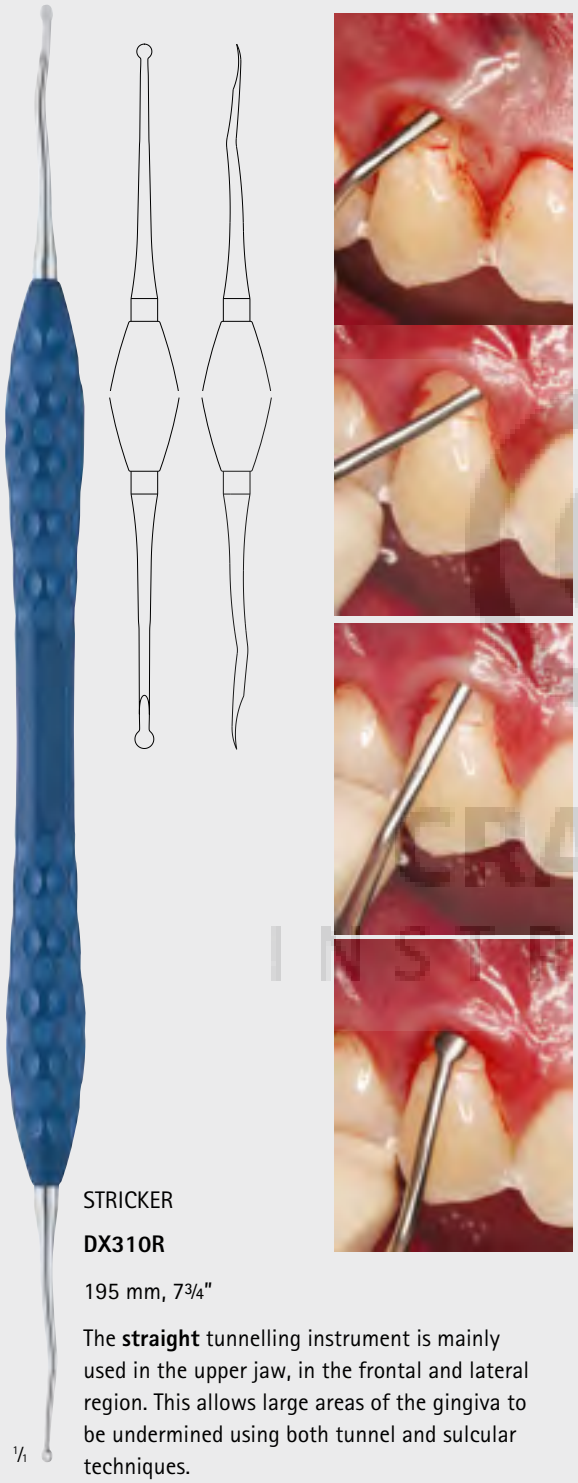

JG598

Sterilit®i oil for grinding stones

Contents: 50 ccm

www.craftedinstruments.com

Instruments for tunnel technique for periodontal recessions

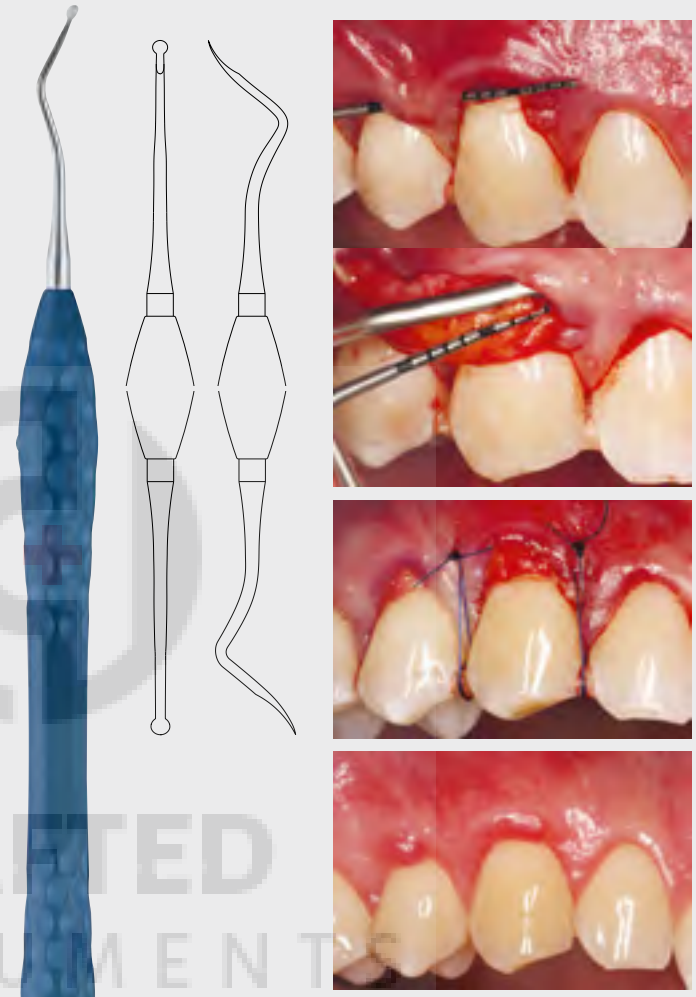

STRICKER

DX310R

195 mm, 7¾"

The **straight** tunnelling instrument is mainly used in the upper jaw, in the frontal and lateral region. This allows large areas of the gingiva to be undermined using both tunnel and sulcular techniques.

STRICKER

DX311R

195 mm, 7¾"

The **angled** tunnelling instrument is primarily used for preparing lateral, buccal regions. It can also be used distally, without tearing the mucosal tissue and also for the lower jaw.

Anatomic Filling Instruments

Special working tips for esthetic fillings

Instrument absolutely tight-covered by a special PEEK handle

Ergonomic handle design

Continuous corrosion-resistant special instrument steel

... millionfold approved!

- Anatomical "high-tech" shape
- Extra light and "handy" allows more fatigue-free working
- Axial- and torsion support avoids "slip-down"
- Ensures a more sensitive and efficient working
- Colored handle prevents mix-up:
  - blue handle for Composite
  - green handle for Amalgam
- Suitable for steam sterilization 270°F, 4 minutes (PreVac) and 275°F, 10 minutes (gravity)

www.craftedinstruments.com

Special hint

Since suture material is rather tough, the cutting capacity of scissors is quickly reduced which is noticeable as soon as tissues are cut afterwards.

Our solution

To cut sutures with special ligature scissors. The ligature scissors FD252R have additionally rounded edges to avoid sutures to get jammed.

Scissors

Screw connection providing:

- smooth and reliable function
- longer life time by the possibility of regrinding

FD251R

Micro scissors (spring type),
curved, sharp/sharp

180 mm, 7"

FD252R

Micro ligature scissors, curved, sharp/sharp,
one blade serrated, for suture material 6/0 – 8/0

180 mm, 7"

CRAFTED INSTRUMENTS

www.craftedinstruments.com

DIADUST™

Diamond Powder Coated Forceps

- non-traumatic and yet firm gripping of sutures and tissues

DIADUST™

Diamond Powder Coated Needle Holders

- Precise gripping of needles and sutures
- long life time, since the degree of the temper of the diamond powder coating is nearly identical to the temper of the needles
- for suture material 6/0 – 9/0

Retractors for retrograde root resection

The ergonomic design of the handle permits a fatigue-free retraction of the tissue even at longer operations. Before the use of the retractor, 2 slight deepenings are burred in the jaw. The 2 tips at the working end of DO373R are inserted and will therefore also provide a secure grip.

Dissecting Scissors, Noir™ Scissors

The combination of the renowned tungsten carbide technology with the Noir™ coating results in an extremely high surface hardness and therefore high wear resistance in daily hospital use.

The extremely hard (2000HV) and low reflection Noir™ coating ensures high wear resistance of the instruments and at the same time provides high resistance against corrosion.

needle holders have jaws with carbide inserts and according to the use required the resp. structure can be chosen. A smooth jaw surface as well as 3 different serrations enable a sure "grip" of the resp. needle.

We recommend carbide inserts

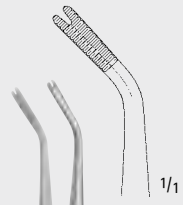

with smooth jaw surface for suture material	9/0 – 11/0
with 0.2 mm pitch of serration for suture material	6/0 – 10/0
0.4 mm	4/0 – 6/0
0.5 mm	up to 3/0

DUROGRIP™

Needle holders see page 141

Special Features:

- Very slender working ends
- The working ends are available in 0.5 mm steps from 2.0 to 5.0 mm
- Gouge-like working end
- Handle with depression for thumb

Benefits:

- Easy access to the roots even in areas difficult to reach
- Greater sensitivity during operation
- More gentle clearance of the alveoli
- Better guidance
- Better grip

The straight model is particularly suitable for removing root residues.

Elevators

With a slight rotary movement, the LINDO-LEVIAN root elevator is pushed between alveolus and root until the groove becomes lodged in the roots. By pulling the root elevator straight down, the barb effect arises in which the root is extracted without leverage.

Elevators, ROSIN Luxator Lever

- good overview due to elegant access
- quick and efficient working
- good and controlled guidance of the instrument due to ergonomically designed handle and support recesses on the working end
- soft tissue is not crushed
- the alveolar bone is not damaged
- reduced risk of root fractures

The first step is to separate the buccal and palatinal gingiva.

By rotating the handle (perpendicular to its long axis) the luxation force is directed distally to elevate the tooth out of the alveolus.

The luxator is inserted between the wisdom tooth and the second molar pushing it firmly to the level of the gingival tissue.

Important note:

The luxation of the wisdom tooth is not achieved by using the second molar as the leverage point for the instrument. The instrument should be used with a rotational force in distal direction to luxate the tooth in a buccal movement.

Continuous corrosion-resistant special instrument steel

Instrument tight-covered by a special PEEK handle

Ergonomic handle design

Hardwearing working tips

Satin finish working tips

In close collaboration with **Dr. Dr. Andres Stricker, Freiburg University,** an instrument range especially designed for dental implantology has been developed for ergonomics concerning the working tips and handle for any specific indication.

ERGOPLANT thus enables working efficiently with minor physical strain under practice conditions.

All ERGOPLANT instruments are suitable for steam sterilization 134°C (Autoclav).

ERGOPLANT – Sinus Elevation

The Schneiderian membrane of the sinus can be detached with elevator DO571R by 1- 2 mm along the total cortical bone

Elevator DO573R is particularly useful in the lower part for detaching the membrane further. The same goes for the caudal area, especially when the membrane is 4-5 mm above the base of the maxillary sinus and the maxillary sinus is built up with granular material.

DO571R

Elevator

190 mm, 7 ½"

DO573R

Elevatorium

Elevator

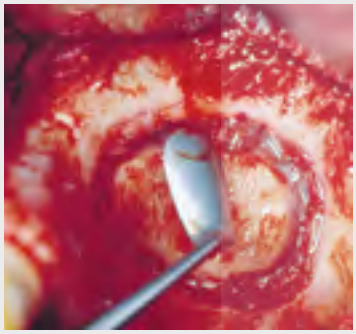

190 mm, 7 ½"

CRAFTED INSTRUMENTS

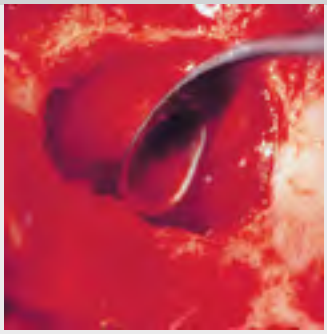

www.craftedinstruments.com

Elevator DO575R makes it possible to lift the membrane further in mesial region. One working tip is specially designed for the right maxillary sinus and the other for the left maxillary sinus.

With elevator DO574R, the sinus membrane is further elevated in the upper and posterior part of the maxillary sinus wall.

With the aid of elevator DO572R, the sinus membrane is further detached over a broad area in the inner region, especially along the roof of the palate. Condenser DX555R permits positioning of the filling material.

For advanced alveolar crest atrophies less than three millimeters wide it is preferable to pursue a two-stage approach, in which, an autologous bone graft from appropriate autologous donor sites should be transplanted to the deficient alveolar crest atrophy region prior to the actual implantation. This is exactly what the Bone Fixation Set was developed for.

Bone fixation forceps:

- **Adaptable**

  The working tips adapt to the respective anatomical situation.

- **Delicate**

  The delicate working tips enable drilling and screwing even in smaller bone blocks.

- **Universal**

  The shape of the forceps allows for universal application in the upper and lower jaw.

Autogenous bone in augmentation has been established as the "golden standard". The region where to gain the bone (Bone Harvesting) and the required consistence for augmentation can vary, depending on the case. Here the ERGOPLANT Micro Bone Mill shows its flexibility where at a high yield of bone-grist is always ensured.

www.craftedinstruments.com

ERGOPLANT – Bone Harvesting

ERGOPLANT Micro bone-mill

- Small and handy
- Interchangeable cutting disks
- Cutting disks available for finer or coarser bone particles
- Easy to clean due to special cleaning instruments

If smaller quantity of bone material is required, with the bone files DX252R-DX253R it can be harvested directly from the jaw-bone, without additional trauma for the patient. The quantity is often sufficient, for augmentation around the implant-neck.

ERGOPLANT – Bone Harvesting / Bone Split

The Step-Osteotome was specially developed for secure bone-splitting with simultaneous stepwise widening. Due to the specially designed working tips, the maxillary crest will be first expanded towards palatinal and only afterwards towards vestibular. In the same time spongy bone in the center will be condensed. After removing the Step-Osteotome, a pre-selection point for the implant bur can be clearly seen.

ERGOPLANT – Bone Split

The maxillary crest is splitted transversal by the Step-Osteotome.

The bone split is kept apart by the retractor.

The implant can be positioned by using the existing bone.

After splitting the maxillary crest the bone split is closing within a short period of time. This leads to an unwished and unnecessary bone loss when drilling afterwards. This causes the risk of an implant that is not exactly positioned and additional augmentative treatments could be necessary. The bone split is kept apart by the retractor. Thus, the existing bone can be, used better to position the implant.

CRAFTED
INSTRUMENTS

www.craftedinstruments.com

Rounded plate-shaped working tips allow more movement, and significantly increase the radius of mobilization in frontal and lateral sub-periostal preparation.

The sharpened edge of the instrument tips also allows sulcular as well as tunnel technique preparation (as with the envelope technique).

The design and angle of the working tips significantly facilitates preparation in convex areas.

1/1

STRICKER

DX310R

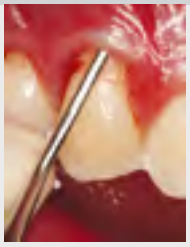

The straight tunnelling instrument is mainly used in the upper jaw, in the frontal and lateral region. This allows large areas of the gingiva to be undermined using both tunnel and sulcular techniques.

- Very delicate working tips facilitate access to dental implant collar
- No risk of infection from curette abrasion
- Low implant damage risk
- Manually sharpenable

To ensure the long-term success of an implant, consistent aftercare is very important.
To eliminate plaque on the implant-abutment interface, titanium curettes can be preferable.

PLANERT Crown widening pliers

- universally applicable in the upper and lower jaws
- essential time saving
- protection of the periodontium
- no stump beaks and no periodontal membrane contusions

PLANERT

DP788R

140 mm, 5 ½"

At the beginning the crown is slit parallel with a relatively thin instrument.

To produce parallel slit edges which can be easily gripped with the pliers, a cylindrical instrument with diam. of approx 1.0 mm is guided perpendicular to the tooth center line.

www.craftedinstruments.com

PLANERT Crown Widening Pliers

- no slipping off of the instruments and no risk of injury to the oral cavity soft tissue
- frequent reusability of the crowns and bridges as temporary measure
- use also possible with thinwalled crowns and hard alloys

The teeth of the crown widening pliers are positioned in order to spread the crown.

Finally the crown will be removed in the conventional way.

Our tip:

The slit walls which are produced must be prependicular. Always cut through the bottom crown edge and, if possible, extend the slit up to the masticatory surface. In the case of bridges, move the slits approximately 1/3 towards the suspension element.

CRAFTED INSTRUMENTS

www.craftedinstruments.com

Designed to minimize the risk of dropping inlays and veneers.

Occlusal stopper and 2 x 2 lateral claws provide a very secure grip for handling all different shapes and sizes of inlay to minimize dropping.

Wheel knob

Forceps, JESCO-Form Impression Trays for Upper Jaws

Impression Trays

JESCO-Form impression trays, impression trays acc. WÖSTMANN perforated pattern. Using plastic or resilient impression compounds, these materials will penetrate the holes and give the necessary support for a correct impression. The impession trays are made of stainless steel 18/8.

The impression trays for lower jaw acc. WÖSTMANN in addition have the following characteristics and advantages:

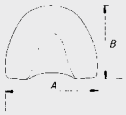

- Modified tray shield and changed tray curve.
- Lengthened tray with simultaneous reduction of transversal expansion.
- All teeth are seized, incl. the third molares
- Sufficient and uniform thickness of the impression compounds in the area of lingual undercut of the teeth.

CRAFTED INSTRUMENTS

* The shapes of the impression trays are based on an analysis of naturally toothed patients of:

De La ROSA

DP335R

125 mm, 5"

Arch bending pliers

- for forming the desired curvature
- the curved design of the jaws allows the curvature of the wires to be adjusted in small steps
- the spring-loaded handle opens the pliers automatically, which facilitates the work
- suitable for all orthodontic wires

NANCE

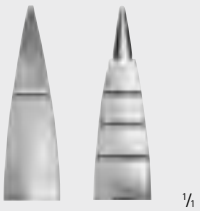

DP333R

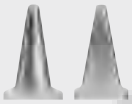

125 mm, 5"

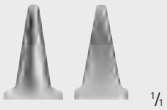

Step loop bending pliers

- Steps of 3, 4, 5 and 6 mm enable exact, even bending, e. g. for utility arches

www.craftedinstruments.com

JARABAK

DP308R

140 mm, 5 ¾"

Light wire pliers

- for shaping and closing loops
- with 3 holding grooves
- max. wire size .028"

ANGLE

DP309R

125 mm, 5"

Bird beak pliers

- with tungsten carbide inserts (can be replaced)
- max. wire size .028"

ANGLE

DP311R

125 mm, 5"

Bird beak pliers

- max. wire size .028"

ANGLE

DP312R

125 mm, 5"

Wire bending pliers

- max. wire size .028"

CRAFTED INSTRUMENTS

www.craftedinstruments.com

Instruments for the permanent technique

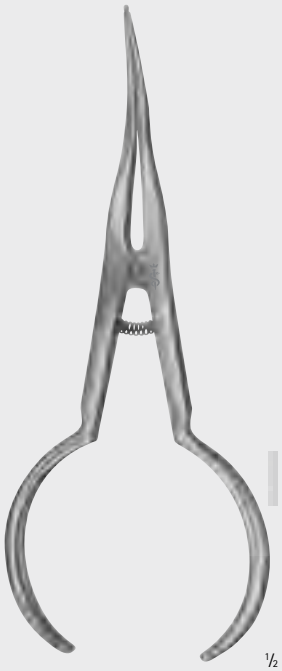

Band removing pliers
To remove bands, the plastic tip is placed on the occlusal surface and the metal beak is placed under the tube or cleat, and the bands are removed in small steps with alternating forces buccally and lingually/palatally.

1/1

1/2

1/2

DF406R

175 mm, 7"

Separating pliers

- for applying separators

DP744R

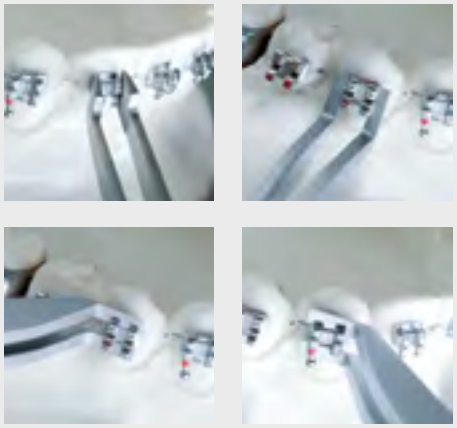

140 mm, 5 ½"

Band remover

- with tungsten carbide insert (can be replaced)
- replaceable plastic tip
  - to plug in (Art.no. **DP744202**)
  - to screw (Art.no. **DP744205**)

CRAFTED INSTRUMENTS

www.craftedinstruments.com

Holds the clamped brackets automatically. The delicate forceps tips can be placed mesially/distally and also under the wings. The end of the forceps can be used to adjust the bracket position.

DP150R

125 mm, 5"

Combination clamp forceps

- straight
- mouth parts serrated
- for positioning brackets
- spindle on forceps end is used for adjusting the brackets.

DP152R

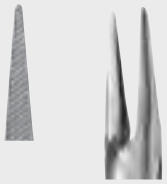

125 mm, 5"

Combination clamp forceps

- angled
- mouth parts serrated
- particularly suitable for positioning brackets in the posterior teeth
- spindle on forceps end is used for adjusting the brackets

www.craftedinstruments.com

DP387R

140 mm, 5 ½"

Alastik holder (MATHIEU)

- with delicate, serrated mouth parts
- for applying rubber ligatures
- Spring enables single-handed use
- the single-step locking mechanism facilitates the work and makes it easier to remove the clamp from the patient.

HALSTED-MOSQUITO

BH110R

125 mm, 5"

Forceps, straight

- mouth parts serrated
- for applying rubber ligatures

HALSTED-MOSQUITO

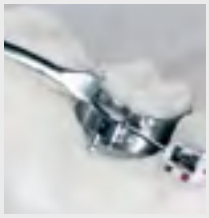

BH111R

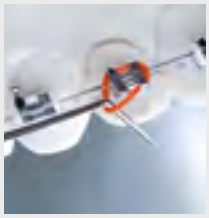

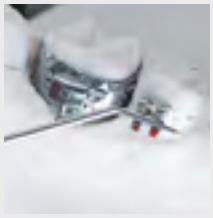

125 mm, 5"

Forceps, curved

CRAFTED INSTRUMENTS

www.craftedinstruments.com

DB370R

175 mm, 7"

Scaler

- for removing adhesive and cement residues

SCHURE

DP380R

160 mm, 7"

Scaler/Pusher

- for positioning and removing bands and for removing cement and adhesive residues

DP406R

150 mm, 6"

Orthodontic probe

- short, strong tip
- among other things, suitable for removing ligatures and adjusting brackets

CRAFTED INSTRUMENTS

1/1

1/1

1/2

1/2

1/2

1/2

DP029R

125 mm, 5"

Flat pliers

- mouth parts serrated
- with short mout parts, for better transmission of force

DP031R

140 mm, 5 ½"

Flat pliers

- mouth parts serrated

DP032R

140 mm, 5 ½"

Flat pliers

- smooth mouth parts

GOSLEE

DP035R

140 mm, 5 ½"

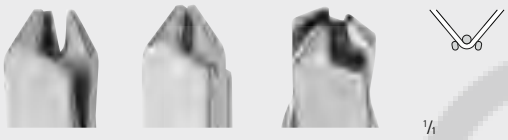

Flat pliers

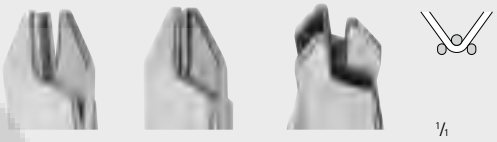

- one smooth mouth part, one serrated

CRAFTED INSTRUMENTS

www.craftedinstruments.com

Instruments for the removable technique

ADERER

DP315R

120 mm, 4 ¾"

Three-finger pliers

- For use with hard wires and spring hard wires in the application of orthodontic appliances, quad-helix appliances, Nance appliances and many other appliances
- max. wire size: 0,7 mm (.028")

ADERER

DP316R

125 mm, 5"

Three-finger pliers

- max. wire size: 0.9 mm (.036")
